## MarTon Joint Venture Awarded \$19.6M Contract Supporting AIMTC at NUWC Division Newport

The MarTon Joint Venture (JV), a partnership between OLH Technical Services and INDUS Technology, Inc., has been awarded a five-year, \$19.6 million contract to support the Undersea Warfare Combat Systems Department (Code 25) at Naval Undersea Warfare Center Division Newport (NUWC DIVNPT) in support of the Advanced Interactive Management Technology Center (AIMTC).

This contract will expand both companies' presence in Newport while providing critical operational, technical, and engineering services to support the Navy's undersea warfare combat systems mission.

Under this award, the MarTon JV will deliver comprehensive operational, maintenance, technical, and engineering support for AIMTC, spanning three facilities on the Newport campus. These facilities are vital to advancing undersea warfare capabilities, and the MarTon JV team will play a key role in sustaining the infrastructure, systems, and laboratories that drive mission success.

"This award highlights the continued trust our Navy partners place in INDUS and our joint venture team," said Eric MacGregor, President and CEO of INDUS Technology. "We are committed to delivering responsive, high-quality operational and engineering support to NUWC DIVNPT and Code 25. We're also excited to expand our footprint in Newport and further strengthen our contributions to the Navy's undersea warfare combat systems mission. Together with OLH, we will provide the technical excellence and mission-focused performance the Navy depends on."

By combining OLH's experience in facilities and technical services with INDUS' engineering and program expertise, the MarTon JV is uniquely positioned to deliver reliable, mission-critical support across NUWC DIVNPT.
